TITLE: Herbicidal compositions with acylated aminophenylsulfonylureas

### Brief Summary Text (22):

The active substances (A) are suitable, if appropriate in the presence of safeners, for controlling harmful plants in a number of plant crops, for example in economically important crops such as cereals (e.g. wheat, barley, rye, oats, rice, corn, millet), sugarbeet, sugar cane, rapeseed, cotton and soybeans. Of particular interest here is use in cereals such as wheat and corn, in particular corn. For the combinations (A)+(B), these crops are likewise preferred. For the combinations (A)+(B3), mutant crops tolerant to the herbicides (B3) or tolerant transgenic crops are especially of particular interest, preferably corn and soybeans, in particular corn which is resistant to glufosinate or glyphosate, or soybean crops which are resistant to imidazolinones.

### Brief Summary Paragraph Table (14):
